Exotic Newcastle Disease Update

- **NEW** [Newcastle Disease Update July 9, 2003 \(PDF 48 KB\)](#)
- Map of Newcastle Outbreak: [\(CDFA_071503 GIF 58 KB\)](#)

Status as of 07/16/03

Staff assigned in California:	642
Premises quarantined:	18,333
Premises depopulated:	2,148
Commercial poultry premises affected:	22
Birds humanely destroyed:	3,016,000
Premises released from quarantine:	7,130

Exotic Newcastle disease (END), confirmed on October 1, 2002 in the State of California, is now in the final phase of eradication. With the eradication of END in Nevada and Arizona, federal quarantines have been removed from the five affected counties, and the incident command posts in the two States have been closed. Similarly, with the eradication of END from the single flock in Texas, the incident command post in TX has been closed. Final eradication and surveillance activities are being planned. Although it appears that END is near total eradication in the United States, national END surveillance is ongoing throughout the US.

Quarantine

- [Quarantine removed from Arizona and Nevada, May 14, 2003 \(PDF 78 KB\)](#)
- [Newcastle Quarantine expanded to part of Kern County May 13, 2003 \(PDF 64 KB\) \[Map \\(GIF 53 KB\\)\]\(#\)](#)
- [Notice of State Quarantine Affecting Bird Owners : Effective March 17, 2003 \(PDF 23 KB\)](#)
- [Notice of Regional Quarantine Affecting Bird Owners: In Effect January 7, 2003 \(PDF 80 KB\) \[Map March 17, 2003 \\(GIF 72 KB\\)\]\(#\)](#)

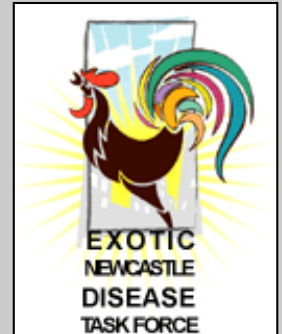

Exotic Newcastle Disease (END) is a contagious and fatal viral disease affecting all species of birds. It is one of the most infectious diseases of poultry in the world; it is so virulent that many birds die without showing any clinical signs, and a death rate of nearly 100 percent can occur. Outbreaks of END severely affect the poultry industry. ▶ [more...](#)
